### **NAME**

ovn-ctl - Open Virtual Network northbound daemon lifecycle utility

## **SYNOPSIS**

ovn-ctl [options] command [-- extra\_args]

# **DESCRIPTION**

This program is intended to be invoked internally by Open Virtual Network startup scripts. System administrators should not normally invoke it directly.

## **COMMANDS**

```
start_northd
start_controller
start_controller_vtep
start_ic
stop_northd
stop\_controller
stop_controller_vtep
stop_ic
restart northd
restart_controller
restart_controller_vtep
restart_ic
promote_ovnnb
promote_ovnsb
demote ovnnb
demote_ovnsb
status_ovnnb
status_ovnsb
start\_ovsdb
start nb ovsdb
start_sb_ovsdb
stop_ovsdb
stop_nb_ovsdb
stop_sb_ovsdb
restart_ovsdb
run_nb_ovsdb
run_sb_ovsdb
promote_ic_nb
promote_ic_sb
demote_ic_nb
demote ic sb
status_ic_nb
status_ic_sb
start_ic_ovsdb
start_ic_nb_ovsdb
start_ic_sb_ovsdb
stop_ic_ovsdb
stop_ic_nb_ovsdb
stop_ic_sb_ovsdb
restart_ic_ovsdb
run_ic_nb_ovsdb
run_ic_sb_ovsdb
```

### **OPTIONS**

--ovn-northd-priority=NICE

- --ovn-northd-wrapper=WRAPPER
- --ovn-controller-priority=NICE
- --ovn-controller-wrapper=WRAPPER
- --ovn-ic-priority=NICE
- --ovn-ic-wrapper=WRAPPER
- --ovsdb-nb-wrapper=WRAPPER
- --ovsdb-sb-wrapper=WRAPPER
- --ovn-user=USER:GROUP
- -h | --help

# FILE LOCATION OPTIONS

- --db-sock=SOCKET
- --db-nb-file=FILE
- --db-sb-file=FILE
- --db-nb-schema=FILE
- --db-sb-schema=FILE
- --db-sb-create-insecure-remote=yes|no
- --db-nb-create-insecure-remote=yes|no
- --db-ic-nb-file=FILE
- --db-ic-sb-file=FILE
- --db-ic-nb-schema=FILE
- --db-ic-sb-schema=FILE
- --db-ic-sb-create-insecure-remote=yes|no
- --db-ic-nb-create-insecure-remote=yes|no
- --db-nb-config-file=FILE
- --db-sb-config-file=FILE
- --db-ic-nb-config-file=FILE
- --db-ic-sb-config-file=FILE
- --db-sb-relay-config-file=FILE
- --ovn-controller-ssl-key=KEY
- --ovn-controller-ssl-cert=CERT
- --ovn-controller-ssl-ca-cert=CERT
- --ovn-controller-ssl-bootstrap-ca-cert=CERT

## PROTOCOL, CIPHER AND CIPHERSUITE OPTIONS

- ${\color{blue} -- ovn-controller-ssl-protocols=} \textit{PROTOCOLS}$
- --ovn-ic-ssl-protocols=PROTOCOLS
- --ovn-northd-ssl-protocols=PROTOCOLS
- --ovn-nb-db-ssl-protocols=PROTOCOLS
- --ovn-sb-db-ssl-protocols=PROTOCOLS
- --ovn-ic-nb-db-ssl-protocols=PROTOCOLS
- --ovn-ic-sb-db-ssl-protocols=PROTOCOLS

- $--ovn-controller-ssl-ciphers = {\it CIPHERS}$
- --ovn-ic-ssl-ciphers=CIPHERS
- --ovn-northd-ssl-ciphers=CIPHERS
- --ovn-nb-db-ssl-ciphers=CIPHERS
- --ovn-sb-db-ssl-ciphers=CIPHERS
- --ovn-ic-nb-db-ssl-ciphers=CIPHERS
- --ovn-ic-sb-db-ssl-ciphers=CIPHERS
- --ovn-controller-ssl-ciphersuites=CIPHERSUITES
- --ovn-ic-ssl-ciphersuites=CIPHERSUITES
- --ovn-northd-ssl-ciphersuites=CIPHERSUITES
- --ovn-nb-db-ssl-ciphersuites=CIPHERSUITES
- --ovn-sb-db-ssl-ciphersuites=CIPHERSUITES
- --ovn-ic-nb-db-ssl-ciphersuites=CIPHERSUITES
- --ovn-ic-sb-db-ssl-ciphersuites=CIPHERSUITES

### ADDRESS AND PORT OPTIONS

- --db-nb-sync-from-addr=IP ADDRESS
- --db-nb-sync-from-port=PORT NUMBER
- --db-nb-sync-from-proto=PROTO
- --db-sb-sync-from-addr=IP ADDRESS
- --db-sb-sync-from-port=PORT NUMBER
- --db-sb-sync-from-proto=PROTO
- ---db--ic--nb--sync--from--addr= IP ADDRESS
- --db-ic-nb-sync-from-port=PORT NUMBER
- --db-ic-nb-sync-from-proto=PROTO
- --db-ic-sb-sync-from-addr=IP ADDRESS
- --db-ic-sb-sync-from-port=PORT NUMBER
- --db-ic-sb-sync-from-proto=PROTO
- --ovn-northd-nb-db=PROTO:IP ADDRESS: PORT..
- --ovn-northd-sb-db=PROTO:IP ADDRESS: PORT..
- --ovn-ic-nb-db=PROTO:IP ADDRESS: PORT..
- --ovn-ic-sb-db=PROTO:IP ADDRESS: PORT..

## **CLUSTERING OPTIONS**

- --db-nb-cluster-local-addr=IP ADDRESS
- $\textbf{---db--nb--cluster--local--port} = PORT\ NUMBER$
- --db-nb-cluster-local-proto=PROTO (tcp/ssl)
- --db-nb-cluster-remote-addr=IP ADDRESS
- --db-nb-cluster-remote-port=PORT NUMBER
- --db-nb-cluster-remote-proto=PROTO (tcp/ssl)
- --db-nb-election-timer=Timeout in milliseconds
- --db-sb-cluster-local-addr=IP ADDRESS

- --db-sb-cluster-local-port=PORT NUMBER
- --db-sb-cluster-local-proto=PROTO (tcp/ssl)
- --db-sb-cluster-remote-addr=IP ADDRESS
- --db-sb-cluster-remote-port=PORT NUMBER
- --db-sb-cluster-remote-proto=PROTO (tcp/ssl)
- --db-sb-election-timer=Timeout in milliseconds
- --db-ic-nb-cluster-local-addr=IP ADDRESS
- --db-ic-nb-cluster-local-port=PORT NUMBER
- --db-ic-nb-cluster-local-proto=PROTO (tcp/ssl)
- --db-ic-nb-cluster-remote-addr=IP ADDRESS
- --db-ic-nb-cluster-remote-port=PORT NUMBER
- --db-ic-nb-cluster-remote-proto=PROTO (tcp/ssl)
- --db-ic-sb-cluster-local-addr=IP ADDRESS
- --db-ic-sb-cluster-local-port=PORT NUMBER
- --db-ic-sb-cluster-local-proto=PROTO (tcp/ssl)
- --db-ic-sb-cluster-remote-addr=IP ADDRESS
- --db-ic-sb-cluster-remote-port=PORT NUMBER
- --db-ic-sb-cluster-remote-proto=PROTO (tcp/ssl)
- --db-cluster-schema-upgrade=yes|no

#### PROBE INTERVAL OPTIONS

- --db-nb-probe-interval-to-active=Time in milliseconds
- --db-sb-probe-interval-to-active=Time in milliseconds

## **EXTRA OPTIONS**

Any options after '-' will be passed on to the binary run by *command* with the exception of start\_northd, which can have options specified in ovn-northd-db-params.conf. Any *extra\_args* passed to start\_northd will be passed to the ovsdb-servers if **--ovn-manage-ovsdb=yes** 

### **CONFIGURATION FILES**

Following are the optional configuration files. If present, it should be located in the etc dir

#### ovnnb-active.conf

If present, this file should hold the url to connect to the active Northbound DB server

tcp:x.x.x.x:6641

#### ovnsb-active.conf

If present, this file should hold the url to connect to the active Southbound DB server

tcp:x.x.x.x:6642

### ovn-northd-db-params.conf

If present, start\_northd will not start the DB server even if **—ovn—manage—ovsdb=yes**. This file should hold the database url parameters to be passed to ovn-northd.

--ovnnb-db=tcp:x.x.x.x:6641 --ovnsb-db=tcp:x.x.x.x:6642

#### ic-nb-active.conf

If present, this file should hold the url to connect to the active Interconnection Northbound DB server

tcp:x.x.x.x:6645

#### ic-sb-active.conf

If present, this file should hold the url to connect to the active Interconnection Southbound DB server

## tcp:x.x.x.x:6646

## ovn-ic-db-params.conf

If present, this file should hold the database url parameters to be passed to ovn-ic.

--ic-nb-db=tcp:x.x.x.x:6645 --ic-sb-db=tcp:x.x.x.x:6646

### RUNNING OVN DB SERVERS WITHOUT DETACHING

```
# ovn-ctl run_nb_ovsdb
```

This command runs the OVN nb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN nb ovsdb-server in a container.

## # ovn-ctl run\_sb\_ovsdb

This command runs the OVN sb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN sb ovsdb-server in a container.

## # ovn-ctl run\_ic\_nb\_ovsdb

This command runs the OVN IC-NB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-NB ovsdb-server in a container.

#### # ovn-ctl run ic sb ovsdb

This command runs the OVN IC-SB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-SB ovsdb-server in a container.

#### **EXAMPLE USAGE**

Run ovn-controller on a host already running OVS

# ovn-ctl start\_controller

Run ovn-northd on a host already running OVS

# ovn-ctl start\_northd

## All-in-one OVS+OVN for testing

# ovs-ctl start --system-id="random"

# ovn-ctl start\_northd

# ovn-ctl start\_controller

### Promote and demote ovsdb servers

# ovn-ctl promote\_ovnnb

# ovn-ctl promote ovnsb

 $\# \ ovn-ctl \ --db-sb-sync-from-addr=x.x.x.x \ --db-sb-sync-from-port=6642 \ --db-sb-probe-interval-to-active=60000 \ demote\_ovnsb$ 

# Creating a clustered db on 3 nodes with IPs x.x.x.x, y.y.y.y and z.z.z.z

Starting OVN ovsdb servers and ovn-northd on the node with IP x.x.x.x

Starting OVN ovsdb-servers and ovn-northd on the node with IP y.y.y.y and joining the cluster started at x.x.x.x

```
# ovn-ctl --db-nb-addr=y.y.y.y --db-nb-create-insecure-remote=yes --db-sb-addr=y.y.y.y --db-sb-create-insecure-remote=yes --db-nb-cluster-local-addr=y.y.y.y --db-sb-cluster-local-addr=y.y.y.y --db-nb-cluster-remote-addr=x.x.x.x --db-sb-cluster-remote-addr=x.x.x.x --ovn-northd-nb-db=tcp:x.x.x.x:6641,tcp:y.y.y.y:6641,tcp:z.z.z.z:6641 --ovn-northd-sb-db=tcp:x.x.x.x:6642,tcp:y.y.y.y:6642,tcp:z.z.z.z:6642 start northd
```

Starting OVN ovsdb-servers and ovn-northd on the node with IP z.z.z.z and joining the cluster started at x.x.x.x

## Passing ssl keys when starting OVN dbs will supersede the default ssl values in db

Starting standalone ovn db server passing SSL/TLS certificates

```
# ovn-ctl --ovn-nb-db-ssl-key=/etc/ovn/ovnnb-privkey.pem
--ovn-nb-db-ssl-cert=/etc/ovn/ovnnb-cert.pem --ovn-nb-db-ssl-ca-cert=/etc/ovn/cacert.pem
--ovn-sb-db-ssl-key=/etc/ovn/ovnsb-privkey.pem --ovn-sb-db-ssl-cert=/etc/ovn/ovnsb-cert.pem
--ovn-sb-db-ssl-ca-cert=/etc/ovn/cacert.pem start_northd
```

## Avoiding automatic clustered OVN database schema upgrade

If you desire more control over clustered DB schema upgrade, you can opt-out of automatic on-start upgrade attempts with **—no-db-cluster-schema-upgrade**.

Start OVN NB and SB clustered databases on host with IP x.x.x.x without schema upgrade

# ovn-ctl start\_nb\_ovsdb --db-nb-cluster-local-addr=x.x.x.x --no-db-cluster-schema-upgrade # ovn-ctl start\_sb\_ovsdb --db-sb-cluster-local-addr=x.x.x.x --no-db-cluster-schema-upgrade

Trigger clustered DB schema upgrade manually

# ovsdb-client convert unix:/var/run/ovn/ovnnb\_db.sock /usr/local/share/ovn/ovn-nb.ovsschema # ovsdb-client convert unix:/var/run/ovn/ovnsb\_db.sock /usr/local/share/ovn/ovn-sb.ovsschema

OVN 25.03.2 ovn-ctl 6
