NAME

ovn-debug − Open Virtual Network debug tool

SYNOPSIS

ovn−debug *COMMAND [ARG...]*

DESCRIPTION

ovn−debug, OVN debug tool, is a tool to help with debugging of OVN setup.

COMMANDS

lflow−stage−to−ltable *STAGE_NAME*

Convert the logical flow stage name e.g. **ls_in_lb** into the logical flow table number e.g. **13**.

lflow−stage−to−oftable *STAGE_NAME*

Convert the logical flow stage name e.g. **ls_in_lb** into the OpenFlow table number e.g. **21**.

lflow−pipeline−oftable−start−list

Print the starting OpenFlow table number of the **ingress** and **egress** pipelines.
