## NAME

ovn-debug − Open Virtual Network debug tool

## SYNOPSIS

**ovn−debug** *COMMAND [ARG...]*

## DESCRIPTION

**ovn−debug**, OVN debug tool, is a tool to help with debugging of OVN setup.

## COMMANDS

**lflow−stage−to−ltable** *STAGE_NAME*

Convert the logical flow stage name e.g. **ls_in_lb** into the logical flow table number e.g. **13**.

**lflow−stage−to−oftable** *STAGE_NAME*

Convert the logical flow stage name e.g. **ls_in_lb** into the OpenFlow table number e.g. **21**.

**lflow−pipeline−oftable−start−list**

Print the starting OpenFlow table number of the **ingress** and **egress** pipelines.
